NICHD NCS Program Office

1. Study Backgeoged代写代做 CS编程铺具

The National Children's Study (NOS) Vanguard Study was a pilot for the planned Main Study cohort and was started in 2009. The study aimed to evaluate environmental influences on child health and development. The Vanguard Study tested different recruitment strategies in 43 counties across 31 states throughout the

The study enrolled ove perinatal, and early chi interviews, neuro-psych collected, along with no sample repository of or

nd followed them through 2014. NCS collected prenatal, 5. At protocol-specified study visits, questionnaires and assessments, and physical examination data were and 4,000 environmental primary samples from which a areated.

2. Teaching Device at: cstutorcs

In addition to the data available for researchers, the NCS Archive provides the NCS Teaching Database comprised of a base child-level data set and several topic-related modules. This data is derived from files available within the NCS Archive and is based on real data collected during the NCS Vanguald study.

The purpose of the NCS Teaching Database is to provide researchers a ready-made database system that can be used for various statistical models, including repeated measures analyses. It is freely available as a resource to supplement classroom examples and student against projects. Those interested in learning more about the source data and study data collection procedures are encouraged to visit the NCS Archive website (https://ncsarchive.s-3.net) and register for full site access.

Disclaimer: The NCS Teaching Database is intended for teaching and educational purposes only. The content within the NCS base dataset and content modules is unsuitable for publication purposes. Specific programming techniques were used to make these data public downloadable files.

https://tutorcs.com

3. Child Dataset

Filename: NCS_Teaching_Child_V1_1

Available Formats: .sas7bdat, .csv

The Child dataset contains 5,604 records, each record representing a child with a unique child identifier CHILD_PIDX. The CHILD_PIDX then may be used to link to the modules described below. Each record also contains the mother's identifier MOM_PIDX that is not unique since siblings and children of multiple births exist on the Child dataset. The data topics included at child-level are birth measurements, demographics, and mother's socio-economic characteristics and demographics. Community-level characteristics are included based on the American Community Survey (ACS). To protect confidentiality, only the birth quarter and year are provided. Similarly, geographic characteristics only include the census region (midwest, northeast, south, west) and an indicator whether the participant's address is within a metropolitan area.

Several ACS characteristics have been merged to the child dataset to capture community information on citizenship, foreign-born population, income, household characteristics, educational attainment, and

race-ethnicity. To avoid disclosure of the participants' communities all ACS data have been converted to deciles (< 10 percent, 17 p </20 percent, 17). The communities all ACS data have been converted to deciles (< 10 percent, 17 p </20 percent, 17). The communities all ACS data have been converted to deciles (< 10 percent, 17 p </20 percent, 17). The communities all ACS data have been converted to deciles (< 10 percent, 17 p </20 percent, 17).

4. Modules d to ink to the Each module contains an encrypted participant ident base dataset. In addition, age at the time of the interview (CHILD_AGE or CHILD_ADJ_AGE) and interview visit (VISIT) can be found in each module. Not all variables were collected for every child participant enrolled in lected as "don't know" and "refused". All missing values, including the "don't know ndicated by ".M". please refer to the following SAS code provided below: To link the Child datase PROC SORT D []; BY CHILD PIDX; RUN; PROC SORT D ET]; BY CHILD PIDX; RUN; DATA [NEW]; MERGE CHILD (IN=A) MODULE (IN=B); BY CHILD PIDX; IF A AND B; WeChat: cstutorcs RUN; -ORignment Project Exam Help PROC SQL; CREATE TABLE SELECT A.CHILD PIDX, A.[CHILD VARIABLES OF INTEREST], B.[MODULE VARIABLES OF INTEREST] FROM batutores@163.com (SELECT * FI INNER JOIN (SELECT * FROM [MODULE DATASET]) AS B ON A. CHILD PIDX=B. CHILD PIDX; QUIT;

4.1 Anthropometric Measures

https://tutorcs.com

Filename: NCS_Teaching_Anthro_V1

Available Formats: .sas7bdat, .csv

The Anthropometry module contains a battery of physical measures collected at the 6-month, 12-month, 24-month and 36-month interviews. The NCS used standardized procedures and equipment to collect precise body measurement data. This file contains 11 variables and 2,795 observations from 2,204 child participants. Children in this file can have up to four observations across the four study visits (approximately 35% of children have two or more records). To account for children born prematurely, an adjusted age variable is provided (CHILD_ADJ_AGE) on the file. Child's weight in kilograms (kg) (WEIGHT); length of the upper arm (humerus) in centimeters (cm) (UPPER_ARM_LENGTH); and mid upper arm (UPPER_ARM_CIRC), waist (WAIST_CIRC), and head (HEAD_CIRC) circumference (cm) were measured at all four study visits. Recumbent length (cm) (LENGTH) was measured from the 6-month interviews to the 24-month interviews. Standing height (cm) (HEIGHT) was measured at the 24-month and 36-month interviews. Per recommendation by the CDC, Body Mass Index (kg/m²) (BMI) was calculated only for children 24 months of age or older. BMI was calculated by dividing the weight measurement by recumbent length or standing height (converted to meters) squared.

4.1.1 Dataset Variables

	ラール		ル ルト へつ (力 4日 七年 日)
Variable	Týpe	Leng h	I M C S 编在
CHILD_PIDX	Char	9	Participant ID of the Child (Encrypted)
CHILD_ADJ_AGE	Num	8	Childs age at time of interview (Months) – adjusted for prematurity
VISIT	- T		Study Interview
WEIGHT	奶油		Weight (kg)
LENGTH	- 4	18	Recumbent length (cm) (not measured at 36-month)
HEIGHT		7:5	Standing height (cm) (not measured at 6-month and 12-month)
ВМІ	Tutor CS	r i	Body Mass Index (BMI) (weight(kg)/height(m) ²) (not calculated at 6-month and 12- month)
UPPER_ARM_LENGTH	4444	A L_	Upper arm (humerus) length (cm)
UPPER_ARM_CIRC	1.7669		Mid upper arm circumference (cm)
WAIST_CIRC	Num	8	Waist circumference (cm)
HEAD_CIRC	Num	8	Head circumference (cm)

4.2 Sleep Rowine Chat: cstutorcs

Filename: NCS_Teaching_Sleep_V1
Available Formats: .sas7bdat, .csv

The Sleep Routine module contains mormation concerning the shird's steeping habits. Sleeping habits were collected at the 3-month, 6-month, 18-month, 24-month, 30-month, 36-month and 42-month visit interviews. This file contains 6 variables and 18,133 observations from 5,301 participants. Children in this file may have up to seven descriptions adds the seven study visits topproximately 91% of participants have two or more records). Data was collected on how much the child sleeps at night (SLEEP_HRS_NIGHT), how often the child is difficult when put to bed (SLEEP_DIFFICULT), and how often the child wakes up during the night (SLEEP_THROUGH). The variable SLEEP_THROUGH was not fielded at the 3-month visit.

4.2.1 Dataset Variables

Variable	LVOS	Length	torcs.com
CHILD_PIDX	Char	9	Participant ID of the Child (Encrypted)
CHILD_ADJ_AGE	Num	8	Childs age at time of interview (Months) – adjusted for prematurity
VISIT	Num	8	Study Interview: 3=3-month visit, 6=6-month visit,42=42-month visit
SLEEP_HRS_NIGHT	Num	8	How many hours does the child sleep at night?
SLEEP_DIFFICULT	Num	8	How often is the child difficult when he/she is put to bed? (5 categories)
SLEEP_THROUGH	Num	8	How often does the child wake at night? (not asked at 3-month) (5 categories)

4.3 Infant Feeding

Filename: NCS_Teaching_Feeding_V1

Available Formats: .sas7bdat, .csv

The Infant Feeding module contains information regarding feeding habits of the child. Infant feeding habits were collected at the 6-month and 12-month visit interviews. This file contains 9 variables and 6,115 observations from 3,918 participants. Children in this file may have two observations across the two study visits (approximately 56% of participants have two records). Information collected during both the 6-month and 12-month interviews include age when the baby stopped consuming breast milk

(BREAST_STOP), how often baby is fed formula (FORMULA) and age when baby was first fed formula on a regular basis (FORMULA) AGE) At the point visit information repair if the pale was ever breastfed (BREAST_FEED) and if the baby is currently being breastfed (BREAST_FEED_NOW) was collected. At the 12-month visit, participants were asked how often the baby is fed breast milk (BREAST_MILK).

4.3.1 Dataset Va

Variable	_#	ા વ		Label
CHILD_PIDX	-65	Tuto		Participant ID of the Child (Encrypted)
CHILD_ADJ_AGE		وزيران		Childs age at time of interview (Months) – adjusted for prematurity
VISIT				Study Interview: 3=3-month visit, 6=6-month visit,42=42-month visit
BREAST_FEED		Num	8	Was baby ever breastfed? (not asked at 12-Month) 1=Yes, 2=No
BREAST_FEED_NOW		Num	8	Is baby currently being breastfed? (not asked at 12-Month) 1=Yes, 2=No
BREAST_MILK	M	Næ	hat:	In the past Tays 10 worten was baby fed breast milk? (total count) (not asked at 6-month)
BREAST_STOP		Num	8	How old was baby when participant completely stopped feeding baby breast milk? (in weeks)
FORMULA	Λ	Num	80.00	In the past cays, how often was baby fed formula? (to fall count)
FORMULA_AGE	A	Mulm		How old was baby when first led formula on a damy basil? (9 categories)

4.4 Child Health Email: tutorcs@163.com

Filename: NCS Teaching Child Health V1 Available Formats: Sas7 dat, .csv4 9 3 8 9 4 7 6

The Child Health module contains information regarding frequently occurring child health conditions. Data for this module were collected at the 6-month, 12-month, 18-month, and 24-month visit interviews. This file contains 11 variable sant 13 case observations in the file contains 11 variable sant 13 case observations across the four study visits. Approximately 87% of the children have data from at least two interviews; approximately 33% have data from all four visits. The variable VISIT defines the visit interview. Across all four visits, variables collected are CHILD_AGE (child's age in months at time of interview), VISIT_WT (child's weight in pounds at most recent well-child visit or checkup), CHILD_HEALTH (caregiver's characterization of child's health), RESPIRATORY (in the last three months – since birth for 6-month visit – has child had wheezing or whistling in the chest?), and FEVER (in the last three months – since birth for 6-month visit – how many days has child had a fever over 101 degrees, not relating to receiving immunizations?).

At the 6-month and 12-month visits, caregivers were asked in the last three months (since birth for the 6-month visit) has child had diarrhea or vomiting (GASTRO) and in the last three months (since birth for 6-month visit) has child had an ear infection (EAR_INFECTION). At the 18-month and 24-month visits, caregivers were asked in the last three months, has child had frequent or repeated diarrhea (DIARRHEA) and in the last three months, has child had three or more ear infections (EAR_INFECTION_FREQ).

4.4.1 Dataset Variables

Variable	Туре	Length	Label
CHILD_PIDX	Char	9	Participant ID of the Child (Encrypted)
CHILD_AGE	Num	8	Childs age at time of interview (Months)

VISIT	Num	8	Study Interview
VISIT_WT	Num	代生	What was the strength of the s
CHILD_HEALTH	Num	8	How would you categorize child's health?
GASTRO	Num	8	In the last 3 months (since birth for 6 month visit), has child had diarrhea or vomiting?
DIARRHEA		(数)	In the last 3 months, has child had frequent or repeated diarrhea? (asked at 18 and 24 month visits)
EAR_INFECTION			In the last 3 months (since birth for 6 month visit), has child had an ear infection?
EAR_INFECTION_FREQ	Tutor	<u>s</u>	In the last 3 months, has child had 3 or more ear infections? (asked at 18 and 24 month visits))
RESPIRATORY		44	In the last 3 months (since birth for 6 month visit), has child had wheezing or whistling in the chest?
FEVER	Num	8	In the last 3 months (since birth for 6 month visit), how many days has child had a fever over 101 degrees, not related to receiving immunizations?

WeChat: cstutorcs

4.5 Mother's Pregnancy Health Project Exam Help

Filename: NCS_Teaching_MomPregHealth_V1
Available Formats: .sas7bdat,.csv

The Mother's Pregnancy Health module contains information regarding frequently monitored health conditions prior to and during pregnancy. Data for this module were aggregated across multiple pregnancy visit interviews. If a mother reported a condition on any of the pregnancy visit interviews, then the flag for the condition was assigned a "Y's". This flee comains 19 variable for 4,314 mothers, each mother having only one record. When linking to a child file, a mother may link to multiple children in the case of twins or multiple pregnancies.

This file contains the mother's eli-reported health status (HEALTH) and body mass index (BMI) based on self-reported height and a pre-pregnancy weight. BMI is stored on the file as both a continuous variable (BMI) and a categorical variable (BMI_CAT) having six categories. If a woman has ever been diagnosed with high blood pressure (HIGHBP_NOTPREG) when not pregnant, hyperthyroidism (THYROID), and asthma (ASTHMA) then these are reported on the file. The conditions reported during the pregnancy include diabetes (DIABETES), high blood pressure (HIGHBP_PREG), preeclampsia (PREECLAMPSIA), early labor or premature labor (EARLY_LABOR), anemia or low blood count (ANEMIA), bladder or kidney infection (KIDNEY), severe nausea or vomiting known as hyperemesis (NAUSEA), Rh disease or isoimmunization (RH_DISEASE), protein in the urine (URINE), infection of the vagina or bacterial vaginosis (VAGINOSIS), and infection with bacteria called Group B strep (GROUP_B). Additionally the current smoking status of the mother is included (CIG_NOW).

4.5.1 Dataset Variables

Variable	Туре	Length	Label
MOM_PIDX	Char	9	Participant ID of the Mother (Encrypted)
HEALTH	Num	8	Participant's personal description of current general health status
вмі	Num	8	Participant's Pre-Pregnancy Body Mass Index (BMI)
